Continuation of 11, does NOT place the application in condition for allowance because:

Applicant's arguments filed July 7, 2009 have been fully considered but they are not persuasive.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., "... a polarizing element in which retardation layer is insented between at leave two reflection polarizers") are not taught in the cited prior at of record. Weber et al. shows two reflection polarizer(s) (112; column 11, lines 20-45; "... the inherent polarizing nature of an array of prisms" & 138; columns 3-4, lines 65-10; "... the reflective polarizer disclosed enion and the high reflectivity and randomizing properties exhibited by many diffusely reflective surfaces") wherein multilayer-stacks/retardation-layer (e.g., 141) having high reflectivity for both's and polarized light over a wide bandwidth, and over a wide range of angles (column 11, lines 20-45), satisfying reasonable interpretation of the claim language. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. Seed her ve Van Geuus, 988 F.2d 1181, 26 USPQ2d 1057 (Fed.
